

Step 1:

Comprehensive Vehicle Inspection

This is done to establish a baseline for your vehicle. We inspect current vehicle condition and all available repair and maintenance history.

Step 2:

Interview

We meet with you to discuss driving habits, how the vehicle is used, how many miles are driven per year, length of trips, how long you plan to keep the vehicle, and any other concerns that may be pertinent.

Step 3:

Projection + Prediction = Forecast

We review factory service intervals, our database of similar vehicles, and our technical reference sources to arrive at a forecast of needed services.

Step 4:

Estimate

We prepare estimated price for forecasted services and fill in the spreadsheet for two years.

Step 5:

Maintenance Timeline

Make appointment for next service. Decide if maintenance services will be performed at our original recommended intervals or if the timeline must be modified.

We are a locally owned family business.

We have been in business since 1991.

While the cars we fix have changed, the values we adhere to have not.

We will always deliver a quality repair or service at a fair price.

We live by the Golden Rule and we strive every day to become more efficient in order to control the customer's cost.
